

Acumatica 2025 SUMMIT

JAN 26 - 29 | LAS VEGAS, NV

REDUCTION IN BEEF

Beef was reduced by **25%** on this year's menu. This action alone saved **~20,000 kgs CO2e**.

Equivalent to driving from Las Vegas, NV to Bellevue, WA 22 times!

TURNKEY BOOTHS

Rather than disposing or remanufacturing booth materials, **100%** of the material—**8,188 kg** in total—was stored for future reuse, keeping emissions and waste to a minimum.

REDUCED TRANSPORT BY 50%

Using standardized booths and strategic packing, the total number of trucks needed to transport freight to and from the event was reduced by **50%**, preventing **14 MT of CO2e**.

That's the equivalent of driving 12 electric cars for a year!

REUSABLE SERVICE WARE

100% of core meals were served on reusable service ware. By using reusable serviceware at this year's summit, Acumatica avoided generating over **2,880 kg** of waste and **55.8 MT of CO2e**.

ELIMINATION OF PLASTIC WATER BOTTLES

By excluding plastic water bottles, Acumatica prevented the production of **20,000** water bottles.

This saved 7,400kg of CO2e, enough to power 1.5 homes for a year.
